Software engineer for Teamup

Teamup facilitates sport by allowing consumers to easily see and join relevant 'micro-events' taking place around them. We provide users with an easier way to create plans and instantly share them with their friends.

We are looking for great software engineers to join us. We are solving some challenging problems involving real-time search, collaborative filtering and rich interface design.

Our developers should have

- A degree in Computer Science/Engineering (BEng/BS/MEng/MS/Phd) or be working towards one
- Significant experience working in Python (using Django)
- Lots of enthusiasm for solving new problems and the ability to deal with some ambiguity!

Experience with the following would be useful

- Writing and using APIs
- Optimising algorithms
- Using jQuery, Ext, or other commonly used javascript frameworks
- Contributing to open source software projects
